TimeTac Mini Time Clock

Our employee time clocks are an upgrade to the punch card systems of previous years. Employees can record their arrival, departure and break times with a register of their fingerprint or a simple contact of an RFID/NFC key ring. Placed beside the door or in the reception area, our time clocks add an appealing and incredibly convenient method for your employees to record their attendance.

Regardless of how you record your time; whether you started your working day via a time clock, tracked your lunch break from your desktop computer and stopped recording as you left the building from your smartphone, all data is stored in the one system. This also means that you can usefully view your tracked time when on the move and can analyse your working hour reports from your office desk. You can of course see which device was used for time tracking.

Due to the convenience of a robust hardware solution, time clocks also bring time tracking to environments where computers or smartphones are not commonly found, such as factories, warehouses, hospitals and more.

Overview

- ① Front Facing NFC Reader
- ② 104 x 63 x 13.6 mm housing (4.09" x 2.48" x 0.53")
- ③ Antenna: 3G / WiFi 2.4 GHz /GPS
